POWER ELECTRONICS ENGINEER

**Contract type**  Long-term contract (CDI)
**Starting date**  To be discussed

**ABOUT US**

Imperix is a Swiss company commercializing prototyping equipment for power electronics, electric drives, smart grids and related topics. Its products are designed to accelerate the implementation of laboratory-scale power converter prototypes and facilitate the derivation of high-quality experimental results. Its customers are world-class universities and industries that have a strong focus on research and typically intend to validate state-of-the-art control techniques or new power converter topologies.

The company offers various levels of services, ranging from the sale of bare products to the delivery of full turnkey solutions that include significantly customized hardware and software. Today, over 80% of sales are made abroad, with customers within 21 countries.

Founded in 2013, imperix is a young and dynamic company of about 10 people. It currently has its premises inside the “Espace Creation” building, in the lively city center of Sion.

**JOB DESCRIPTION**

At imperix, engineering activities can be roughly subdivided into product development and customer-oriented projects. The first category encompasses digital control solutions for power electronics as well as prototyping equipment for the power stage of power converters. The second category involves control implementations (software), be it for control upgrades, test benches, application examples or other subcontracted control designs.

The related converter topologies range from thyristor-based rectifiers to modular multilevel converters, going through resonant converters or other modern converter structures. Typical applications also vary broadly from motor drives to PV or energy storage systems, going through microgrids and wireless power transfer systems.
In this context, imperix seeks to reinforce its team with an experienced engineer who can tackle advanced control problems and contribute to/manage projects of increasing size and complexity. Furthermore, contributions to product development are also expected.

RESPONSIBILITIES AND MAIN DUTIES

• Lead and execute the development of various control implementations
• Contribute to technical sales and project scheduling (with customers)
• Undertake the role of project manager and assume all related tasks
• Coordinate with the R&D team for planning and release management
• Write technical and/or commercial documentation (English)

REQUIREMENTS AND QUALIFICATIONS

Education and experience  MSc or PhD in electrical engineering (or similar).
Seniority  Mid-senior to Senior. Relevant experience in power electronics required.
Language  Excellent communication skills in English, both written and spoken. Ease with French. As of today, the main working language at imperix is (still) French.

THIS POSITION WILL SUIT YOU IF

• You are seeking to work in a dynamic, fast-paced environment
• You are seeking to address state-of-the-art control applications on a daily basis
• You are self-motivated and capable of working both individually and as part of a team
• You are a down-the-earth person with a natural focus on bringing effective solutions but you are nonetheless familiar with "trendy" theoretical academic research topics
• You are comfortable with responsibilities and capable of meeting with strict deadlines
• You are looking for a position giving place and granting value to your initiatives
• You appreciate a young and friendly environment that is also serious and professional
• You need a flexible schedule and/or the ability to work remotely

If you feel like working with us, please send us your CV along with a cover letter explaining your motivations and what you would bring to the team. Email correspondence should be addressed to jobs@imperix.ch. We reserve the right to maintain correspondence only with profiles that reasonably correspond to the position.
